

ABSTRACT OF THE DISCLOSURE

A telescoping topstay for a rigger that includes a length adjustable tubular member with a plug connector attached at its distal end which attaches by a bolt to the top end of the oarlock pin and a proximal end that attaches to a base bracket attached to the sides of the boat hull. Attached to distal end of the tubular member is a diagonally aligned plug connector. The plug connector is able to selectively rotate and lock in a desired position on the distal end. Attached to the proximal end of the tubular member is a transversely aligned pivot connector that connects to the base bracket. The pivot connector is able to axially rotate over the proximal end of the tubular member. The pivot connector is also able to rotate over the base bracket.
